EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Ronald Kananen on April 26, 2006.

The application has been amended as follows:

Claims 13 and 17 have been cancelled without prejudice.

Reasons For Allowance

The prior art of record does not disclose or fairly suggest a laser corneal surgery apparatus for ablating a cornea including a laser irradiation element, means for capturing a first image of an anterior segment of an eye and capturing a second anterior segment of an eye, the second image including marks provided on the eye outside the intended ablation area, a means for detecting characteristic points of the eye and a means for detecting the marks provided on the eye, a means for automatically detecting a torsion error angle and automatically correcting the orientation between the patient and the laser system based on the torsion error detected. U.S. Patent 6,702,806 to Gray et al. teaches that a torsion error occurs when a patient is moved from an upright position as is common during an examination of an eye and a prone position as is typical during a laser procedure and further teaches an apparatus and method for detecting and calculating said torsion error. However, Gray et al. require operator intervention to align images in the determination of the error. U.S. Patent Application Publication US 2003/0120266 to Fujieda also teaches torsion error but does not disclose the automatic detection and correction.
